```
Apples-Air% git --version
git version 2.30.1 (Apple Git-130)
Apples-Air% git --help
usage: git [--version] [--help] [-C <path>] [-c <name>=<value>]
        [--exec-path<path>] [--html-path] [--man-path] [--info-path]
        [-p | --paginate | -P | --no-pager] [--no-replace-objects] [--bare]
        [--git-dir=<path>] [--work-tree=<path>] [--namespace=<name>]
        <command> [<args>]
```

These are common Git commands used in various situations:

```
start a working area (see also: git help tutorial)
  clone      Clone a repository into a new directory
  init       Create an empty Git repository or reinitialize an existing one

work on the current change (see also: git help everyday)
  add        Add file contents to the index
  mv         Move or rename a file, a directory, or a symlink
  restore    Restore working tree files
  rm         Remove files from the working tree and from the index
  sparse-checkout Initialize and modify the sparse-checkout

examine the history and state (see also: git help revisions)
  bisect    Use binary search to find the commit that introduced a bug
  diff      Show changes between commits, commit and working tree, etc
  grep      Print lines matching a pattern
  log       Show commit logs
  show      Show various types of objects
  status    Show the working tree status

grow, mark and tweak your common history
  branch    list, create, or delete branches
  commit    Record changes to the repository
  merge     Join two or more development histories together
  rebase    Reapply commits on top of another base tip
  reset     Reset current HEAD to the specified state
  switch    Switch branches
  tag       Create, list, delete or verify a tag object signed with GPG

collaborate (see also: git help workflows)
  fetch     Download objects and refs from another repository
  pull      Fetch from and integrate with another repository or a local branch
  push      Update remote refs along with associated objects
```

'git help -a' and 'git help -g' list available subcommands and some concept guides. See 'git help <command>' or 'git help <concept>' to read about a specific subcommand or concept.

See 'git help git' for an overview of the system.

Apples-Air% cd Desktop/git-demo/git-project/

```
Apples-Air% git init
Reinitialized existing Git repository in /Users/apple/Desktop/git-demo/git-project/.git/
Apples-Air% cd course-git-blog-project
```

```
Apples-Air% ls

hint: Pulling without specifying how to reconcile divergent branches is
hint: discouraged. You can squelch this message by running one of the following
hint: commands sometime before your next pull:
hint:
hint:   git config pull.rebase false  # merge (the default strategy)
hint:   git config pull.rebase true   # rebase
hint:   git config pull.ff only        # fast-forward only
hint:
hint: You can replace "git config" with "git config --global" to set a default
hint: preference for all repositories. You can also pass --rebase, --no-rebase,
hint: or --ff-only on the command line to override the configured default per
hint: invocation

commit 11c8d645f17b48de79936a07e952bc4a1870947a (HEAD -> abc)
Author: Raghav Gandhi <rgandhi3352@gmail.com>
Date: Fri Jul 23 13:46:36 2021 +0530
```

adding branch to repo

```
commit 66e4bdc8af652887385a408e9abe4d4e02b8aef (origin/master, origin/main, master)
Author: Raghav Gandhi <32937697+rgandhi3352@users.noreply.github.com>
Date: Thu Jul 22 15:49:00 2021 +0530
```

WC(1) BSD General Commands Manual WC(1)

## NAME

**wc** -- word, line, character, and byte count

## SYNOPSIS

**wc** [-clmw] [file ...]

**DESCRIPTION**

The **wc** utility displays the number of lines, words, and bytes contained in each input file, or standard input (if no file is specified) to the standard output. A line is defined as a string of characters delimited by a <newline> character. Characters beyond the final <newline> character will not be included in the line count.

A word is defined as a string of characters delimited by white space characters. White space characters are the set of characters for which the `isspace(3)` function returns true. If more than one input file is specified, a line of cumulative counts for all the files is displayed on a separate line after the output for the last file.

The following options are available:

**-c** The number of bytes in each input file is written to the standard output. This will cancel out any prior usage of the **-m** option.

```
-1 The number of lines in each input file is written to the standard output.
```

**-m** The number of characters in each input file is written to the standard output. If the current locale does not support multibyte characters, this is equivalent to the **-c** option. This will cancel out any prior usage of the **-c** option.

**-w** The number of words in each input file is written to the standard output.

When an option is specified, `wc` only reports the information requested by that option. The order of output always takes the form of line, word, byte, and file name. The default action is equivalent to specifying the `-c`, `-l` and `-w` options.

If no files are specified, the standard input is used and no file name is displayed. The prompt will accept input until receiving EOF, or (^D) in most environments.

## ENVIRONMENT

The LANG, LC\_ALL and LC\_CTYPE environment variables affect the execution of `wc` as described in `environ(7)`.

## EXIT STATUS

The `wc` utility exits 0 on success, and >0 if an error occurs.

## EXAMPLES

Count the number of characters, words and lines in each of the files `report1` and `report2` as well as the totals for both:

```
wc -mlw report1 report2
```

## COMPATIBILITY

**HISTORY**

Historically, the `wc` utility was documented to define a word as a "maximal string of characters delimited by '<space>', <tab> or <newline>' characters". The implementation, however, did not handle non-printing characters correctly so that "'d'" counted as 6 spaces, while "'fooD'bar'", counted as 8 characters. 4BSD systems after 4.3BSD modified the implementation to be consistent with the documentation. This implementation defines a "word" in terms of the `iswspace(3)` function, as required by IEEE Std 1003.2 ('POSIX.2').

**SEE ALSO**

```
iswspace(3)
```

## STANDARDS

The `wc` utility conforms to IEEE Std 1003.1-2001 ('`POSIX.1`').

## HISTORY

A **wc** command appeared in Version 1 AT&T UNIX.
